Forecast for Thursday 04 May 2023

Weather: Clear spells and high cloud during the overnight period leading to a bright start to the day on Thursday. Thickening cloud by the afternoon with a chance of showers moving in from the south. These may give some briefly heavy rain, but equally much of the Brecon Beacons may miss them and stay dry. Low chance of isolated thunder and lightning. Strong easterly winds over the summits and gusty conditions elsewhere but winds easing a little later.

Chance of cloud-free hill tops above 600m: >95% through the morning falling to 60% by dusk.

Low cloud and visibility: All cloud well above summits during the morning. Patches above 600m developing in association with any afternoon/evening showers, with more extensive periods above 400-500m possible by the evening, mainly in the south and west of the national park. Generally very good bust distant hills will appear hazy. Locally falling to moderate in any showers with very poor visibility possible in any hill fog later.

Meteorologist's View

Strong and gusty easterly winds during the early hours of Thursday, with maximum gusts locally 10-15 mph higher than those show in the table above (i.e gusts up to 40-45 mph locally). The winds will peak by mid-morning on Thursday before easing during the remainder of the day. Low risk of lightning with afternoon/evening showers, however any heavy rain is likely to be brief.

Recent rainfall: measured at Neuadd: altitude 353m

Recorded at	Last 24 hours:	Last 48 hours:	Last 72 hours:
14:00 on Tue 02 May 2023	0mm	1.4mm	6.6mm

Forecast for Friday 05 May 2023

Weather: The chance of a few showers during the early hours of Friday and a rather cloudy start to the morning. Skies brightening with sunny spells developing but a chance of heavy showers forming, drifting towards the northeast. There's a risk of hail and thunder, particularly in northern and eastern areas, with the risk of showers decreasing quickly from late afternoon. Becoming mainly dry by the evening with plenty of late sunshine.

Maximum wind: South-westerly 20 mph gusting 30 mph, easing to 15-20 mph by the evening.

Chance of cloud-free hill tops above 600m: 60% becoming 90%.

Low cloud and visibility: Periods of cloud above 400-500m at first, soon lifting and breaking to become patchy above 700-800m by mid-morning. Occasional patches above 850m during the afternoon in association with showers but most summits becoming cloud free. Very good visibility in general with distant hills clear to see, but briefly falling as showers pass through as all but nearby hills disappear. Locally very poor in hill fog.

Temperature: **Valleys:** Plus 9 Celsius rising to plus 16 Celsius.
At 600m: Plus 8 Celsius rising to plus 12 Celsius.
Freezing level: Well above the summits.

Monday	Further rain is likely to arrive from the west, possibly heavy for a time. Uncertainty remains regarding the timing of this band of rain. Moderate south-westerly winds.
